

Breeze eDiscovery Suite

System Requirements

breeze

Do it yourself.

Native Files Custom Blowbacks
Electronic Bates Stamp
Create Load Files High Quality OCR

System Requirements

Breeze eDiscovery Suite should process on a dedicated machine or a machine running in “dedicated mode”. Dedicated mode is when no other processes are running on the evaluation or processing station at the same time Breeze eDiscovery Suite is processing data. For example, a good time to process native files is when you’ve gone home for the evening. This will allow Breeze to access the appropriate programs to open and access the native data files. It is normal to see programs such as Microsoft Word[®] open and close during the TIF conversion process. Breeze requires that the native files being converted to TIF have either (1) the associated native program installed or (2) a file viewer program with the native file associated with the viewer to access the file. Breeze does not require any specific file viewer to perform the TIF conversions.

System Requirement	Minimum Settings / Configuration	Optimal Settings / Configuration
Software	Microsoft Office 2007 Microsoft Outlook – Create Alias Mail Account* Adobe Acrobat Reader	
Antivirus**	Current and up to date antivirus software should always be run against an eDiscovery project**	
Operating System	Microsoft Windows 2000 Microsoft Windows XP SP 2 Windows Vista Windows 7 *** Please contact support for information on server installation and processing	Windows XP SP 2
Processor (CPU)	Core 2 Duo	Core 2 Quad
RAM	2 GB	2+ GB
Hard Drive Space for Install	50 MB	
Hard Drive Space for Execution and Processing	3 times the Size of the original data to accommodate compressed file expansion, mail store expansion and TIFF conversion	

* Microsoft Outlook[®] must be configured with a default mail account other than a mail account for an active user. From the control panel make the following configuration: (1) Go into Control Panel\Mail Settings; (2) Select the Profiles button; (3) Create a new profile; (4) Name the profile "eDocs"; (5) In the profile, create a mail account; (6) Assign a user name of "_"; (7) Create a password of "_"; (8) Assign the email address (that is underscore@) _@xyz.com; (9) Make the mail and smtp server addresses "_" hit save. You will get an error that the server cannot be found. Ignore it and continue.

** Breeze recommends that current, activated antivirus software should always be installed on a workstation performing eDiscovery processing. Breeze is not liable for damaged caused by viruses that were uncovered or activated during the eDiscovery processing. Breeze recommends keeping all antivirus software running on the Breeze eDiscovery workstation. All antivirus software should be regularly updated to ensure proper protection.
