

Breeze Image Manager

Create New Document Breaks and Instantly Update Load Files

6
breeze

Split Existing Document

Split an existing document into multiple documents. After you have created your new documents, update your load file(s) in an instant.

Set Document Breaks

View all pages in the top pane and use zoom tools in the bottom pane to easily identify where document breaks should reside. After you have updated your document breaks, update your load files. It's simple!

DII to Breeze

Use an existing DII file to create a Breeze.mdb file. After you have the Breeze file, you can begin assigning new document breaks in either "Set Document Breaks" or "Split Existing Documents" Breeze Image Manager options.
